WORLD LIVESTOCK NUMBERS, SLAUGHTER, RED MEAT PRODUCTION,
CONSUMPTION AND TRADE 1977-81 1/

World meat supplies are expected to tighten this year as red meat production declines about 1 percent. The decline in red meat output will result largely from a sharp drop in North American pork production and another decrease in Soviet meat production.

LIVESTOCK NUMBERS

Preliminary data on world cattle numbers for January 1981 indicate a strong increase during 1980, the second consecutive year of growth after a trend of declining numbers since 1975. Strong gains in Brazil and the United States more than compensated for declines in Australia and Poland.

Cattle cycles in a number of the major cattle-producing countries appear to be in rough synchronization. Cattle numbers rose in the United States, Canada, New Zealand, and many other countries. They almost certainly would have risen in Australia as well, but extremely dry weather in the major livestock areas proved to be a problem. Cattle numbers in Oceania are also being affected by competition from sheep production, which has been responding to favorable wool and lamb prices since the late 1970's.

1/ The countries reviewed in this circular are generally considered the major producing and/or trading countries. It usually reviews about 53 countries, but the number may vary by commodity. Data for China are not included because they are limited. Data from official Chinese sources indicate 1979 yearend numbers of 320 million hogs (perhaps 40 percent of the world total), 183 million sheep and goats, and 71 million cattle. Earlier published data from Iran have been excluded because there are no comparable data for recent years.

Some countries are relatively insulated from the influence of the cattle cycle. Brazil, for example, has seen its cattle herd growing since 1977. The number of cattle there is more heavily influenced by weather and changes in land use, including lands cleared from forest, than by the cattle cycle. The EC is somewhat insulated from the cycle by its meat policies and, in recent years, is experiencing only small yearly increases. And in India, where religious customs preclude economic influences on cattle numbers, there was a minor decline in cattle numbers in 1980.

Cattle numbers in the Soviet Union at the beginning of this year were just fractionally larger than those of a year earlier. The number of cattle in Eastern Europe declined about 1 percent primarily because of a 4 percent drop in Poland, which is the country with the largest herd.

Hog numbers for the countries reported in this circular were down slightly at the beginning of this year. Reduced numbers in the Soviet Union and the United States--the two countries with the largest hog inventories--and in Japan more than offset for gains in many other countries. Hog numbers in Brazil increased again during 1980, making South America the largest growth area for hog numbers last year. The drastic reduction in hog numbers and pork production in the Dominican Republic is a result of the program to eradicate African Swine Fever in that country. On the other hand, imports of pork into the Dominican Republic are rising rapidly and should reach 10,000 tons this year, more than triple 1979's level.

Sheep numbers at the beginning of 1981 were slightly lower than those of a year earlier, while goat numbers were slightly higher. Adverse weather in both the Soviet Union and Australia, the countries with the largest numbers of sheep, caused overall numbers to decline and more than countered gains in other countries. New Zealand, with the third largest number of sheep of those countries reviewed, continued its inventory expansion. Though it has only a small percentage of the world total, the United States continued to increase its sheep numbers for the second consecutive year--reversing a pattern of decades of declining numbers.

Livestock Slaughter

Total cattle and buffalo slaughter fell almost 3 percent in 1980 from the 1979 level. The decline would have been larger if it were not for the dry conditions in Australia and, to a lesser extent, in the United States and Canada. These dry conditions caused distressed slaughter and/or the marketing of a sizable number of cattle that normally would have been held to expand breeding herds. Short feed supplies hampered efforts to expand cattle herds, while the larger than expected beef supply helped hold down prices, thus weakening the economic incentive to expand herds. Because of these factors, virtually the same number of cattle and buffalo are expected to be slaughtered in 1981 as in 1980.

The number of hogs slaughtered rose about 3 percent in 1980 compared with 1979 following a 6 percent growth rate in both 1978 and 1979. Slaughter increased in most countries in 1980--the major exceptions were the Soviet Union, Poland, and Taiwan. Hog slaughter in 1981 is expected to be down, with declines forecast in the United States, the Soviet Union, Poland, and Mexico. Hog slaughter in Brazil is expected to show a strong increase in 1981 as its hog industry continues to expand.

Sheep and goat slaughter rose almost 2 percent in 1980 but little if any increase is expected for 1981 because slaughter in Australia is forecast to drop sharply. Increased slaughter in most countries during 1980 paralleled rising inventories. However, in Australia and the Soviet Union increased slaughter was largely due to weather problems, and it occurred at the expense of inventory numbers.

Data on horse slaughter were available from a smaller number of countries and showed a decline of about 10 percent in 1980. The greatest reduction was in Latin America.

Red Meat Production

The total production of red meats in the countries reviewed increased about one-half of one percent in 1980, compared with 1979. A larger pork, lamb, mutton, and goatmeat output more than compensated for the small decline in beef production. The lower beef production was largely a result of declines in output in the Soviet Union, Oceania, and Argentina. Beef production in 1981 is expected to decline slightly from the 1980 level as output continues to decline in the Soviet Union and Oceania and the uptrend in the EC is reversed.

Increased pork production in Canada, Mexico, the United States, Brazil, the EC, and Japan, more than compensated for declining output in Poland and the Soviet Union. Overall production rose over 2 percent from the 1979 level. Pork output in 1981 is expected to decline from the 1980 level, perhaps by 1 to 2 percent. This decline would result largely from lower production in North America and the Soviet Union. Strong increases in pork production in South America are expected to continue in 1981. Lamb, sheep, and goatmeat production expanded slightly in 1980. A small decline in 1981 is likely as production in Australia decreases because of the effects of the drought.

Red meat production in 1981 is forecast to decline slightly from last year's. Production of all red meat is expected to decline, but the drop in pork output will be the greatest. Production levels for particular countries will fluctuate relatively widely. A strong rise is expected in Brazil, but declines are anticipated in the United States, Oceania, the Soviet Union, Poland, and the EC. The increase in Brazil will occur in both the pork and beef sectors. The drop in

the United States will be entirely in pork, but for the Soviets the decline will be in both beef and pork. Poland is expecting a drop in all three red meat categories, and the EC decline will likely be due almost entirely to lower beef production. Horse meat production is expected to fall about 10 percent, paralleling the decline in slaughter.

Trade

International trade in meats is an important component in establishing food consumption patterns throughout the world. It also affects how certain countries' utilize their resources. Some countries, such as Japan, Greece, and Portugal, are almost solely importers of meats while others, such as Australia, New Zealand, Argentina, are solely exporters. Many countries, like the United States, import sizable quantities of manufacturing beef, while exporting important quantities of high-quality fed beef and variety meats. Similarly, the United States exports fresh, chilled, and frozen pork to many countries, while importing canned hams and shoulders, especially from Europe. Other countries may import one variety of meat while exporting another. The EC, while limiting meat imports from non-EC sources through various measures, has extensive intra-Community trade and subsidizes sizable quantities of meat for export. A review of trade figures indicates an increasing movement of meat exports to countries other than those covered in this report. This is especially true for beef, lamb, and mutton exports. Unfortunately, reliable data on meat trade are currently not available from such countries.

Trade in meats slowed in 1980 as declines in imports by some of the larger importing countries--such as the United States, Japan, Brazil, Spain, and Israel--more than outweighed larger imports by the USSR and the EC. Beef imports into Korea, Portugal, and Spain dropped dramatically as higher stocks and/or weak economies thwarted imports. In addition, reduced exports, especially by Argentina and Australia, outweighed gains in exports made by the EC and certain other countries. The trade decline was heavily concentrated in beef where world supplies were tight.

Total trade in 1981 is expected to remain near the 1980 level. A slight decline in total meat exports, however, is forecast--partly because of lower beef exports from Australia and Argentina. Total imports should rise about 2 percent, led by a growth in Japan's pork imports.

Consumption of red meat ^{2/}

Consumption of red meats in 1980 was virtually unchanged. Beef consumption fell 1 percent and horsemeat 7 percent, but a 2.5 percent increase in pork more than offset the decline. In particular, the USSR, the United States, Poland, and Australia consumed less beef in 1980. Pork consumption, on the other hand, increased significantly in the United States, Brazil, Canada, and Japan and more than offset declines in the USSR and Poland. Lamb, mutton, and goatmeat consumption fell slightly owing to declines in Japan and Australia.

Consumption of these same meats are expected to decline about 1 percent in 1981. Pork consumption is expected to drop 2 percent, owing largely to declines in the United States and the USSR. Beef, lamb, mutton, and goatmeat consumption, on the other hand, should only decline slightly from 1980 levels. Certain countries, however, such as Canada and Brazil, expect notable gains in beef consumption, while Australia and some other countries are expected to register declines.

Consumption patterns, like patterns in trade and production, may be affected by a number of ongoing events. Continuing weather problems in Australia, and the United States, could affect producers' decisions on whether to feed, hold or sell their animals for slaughter. The unstable situation in the Middle East could affect the demand for sheepmeat. Conditions in Eastern Europe could result in additional imports of meat and/or increased slaughter in the short term. And the generally weak economies in many countries and rising production costs will affect both consumption and production decisions in 1981.

2/ Since consumption is frequently calculated as a residual in country livestock production statistics, the figures in these tables only approximate per capita human consumption when total consumption is divided by population figures. Changes in stock levels account for variations between the production and trade data and consumption level.
